

CORD SPECIMEN COLLECTION INSTRUCTIONS:

After the important steps of the birth process are complete, please help your patient [and newborn] preserve memories that will last forever.

1.

Please use the scalpel blade in the kit to cut a 2-3 cm (1½ in) portion of the mid-section of the umbilical cord.

2.

Place the cord sample in the formalin container provided in the collection kit.

3.

Place the closed jar in the cardboard insert with the cloth underneath. Seal all of that in the bag, and return it to the parent(s).

[Thank you for your help!]
